SUMMARY

Final-year Engineering student skilled in C++ on Linux and automotive communication (SOME/IP & CAN). Experience in socket programming, service-oriented communication, and embedded system–based academic projects.

EDUCATION

Degree	School / College	Year	Score
B.E (Electronics &Telecommunication)	BVCOE, Navi Mumbai	2022- 2026 (Expected)	CGPA : **8.12/10**
HSC	Mahatma Gandhi Junior college, Pune	2022	**72.60%**
SSC	Jawahar Vidyalay Chas – Kaman, Pune	2020	**91.60%**

SKILLS

- ✓ **Programming Languages:** C | C++ | Embedded C ((Intermediate)| OOP Concepts | Python basic
- ✓ **Automotive:** CAN Bus | SOME/IP & Service Discovery | Socket Programming (TCP/UDP) | JSON Configuration Files | Adaptive AUTOSAR concepts (basic) | Signal to Service
- ✓ **Embedded & Electronics:** PCB design (Kicad) & Assembly | Microcontrollers based systems | Verilog (Intermediate) **|** VLSI Fundamentals | UART, SPI, I2C (basic)
- ✓ **Tools & Platforms:** Linux (Ubuntu) | Wireshark | Visual studio | Kicad | Xilinx Vivado | Git & Github (basic) S32 Design Studio
- ✓ **Hardware Exposure :** NVIDIA Jetson ORIN Nano | NXP MPC5748G | Arduino Uno | ESP32

EXPERIENCE

Embedded Product Development Intern | Semiconware Technologies Pvt. Ltd – (July 2025 – Present)

- Completed assigned technical tasks to support an automotive middleware project
- Practiced TCP/UDP socket programming and explored CAN in-vehicle communication.
- Configured vSomeIP JSON files and analyzed service discovery and message flow using Wireshark.
- Building a Server–Client C++ application on Linux

Mechatronics Intern | TATA IIS, Mumbai – 2 weeks

- Achieved practical knowledge in Industrial Pneumatics, Electro pneumatics, Hydraulics, Electrohydraulic.
- designing basic PLC based control systems and understanding of real-world manufacturing process.

Electronic Intern | Vishal electronics, Ghansoli – 1 Month

- Assembled printed circuit boards using soldering tools and gained exposure
- Assisted in Wire tinning, Terminal making, wiring and PCB stuffing for efficient circuit connections

PROJECTS

1. **Middleware Development for Automotive Industry**–Implemented a communication gateway to integrate traditional automotive CAN networks with modern service-oriented Ethernet architecture (SOA) using C++ on Linux, SOME/IP protocol , simulating real ECU-to-ECU communication architecture based on industry standards.
2. **Continuous vehicle Health Monitoring System –** Real-time vehicle health tracking using ESP32, monitoring tire pressure, engine temperature, battery status, and GPS location.
3. **FPGA Based Digital Logic Interfacing –** Designed and implemented digital logic circuits using Xilinx FPGA Kit, Verilog HDL and Vivado.
4. **Distance Measuring Machine –** Built using ultrasonic sensor, Arduino Uno microcontroller and C programming
5. **Laser Security System** – Implemented using diode-based laser sensing technology

ADDITIONAL INFORMATION

NSS Leader – 1 Year | **Sponsorship Team Member** – 1 Year
